## VACUUM LIFTERS FOR INSULATED PANELS SALES AND RENTALS

These modular vacuum lifters are expandable to meet a variety of material handling needs. The linear design of single-channel lifters provides proper support for long materials, while double-channel lifters can be configured as needed for wide materials.

- Interchangeable Lift Frames offer 180° rotation and 90° tilt for a full range of load manipulation.
- Channels can be switched from one Lift Frame to another in minutes, for maximum versatility at the installation site.
- May be ordered as complete units or as individual components to expand existing Channel Lifter systems.
- On-board power permits cord-free use with cranes, forklifts or floor hoists.
